EXAMINER'S COMMENTS

Independent claims 1 and 9 of the instant invention recite the limitation of a spacer having an annular arm engaging the interrupted annular projection axially extending from a first face of the turbine wheel. In addition, on page 6, paragraph [0015], Applicant discloses "the stage one wheel 16 and stage two wheel 26 are joined together by spacers 28 and 30 to form part of the turbine rotor 11". On the other hand, element 86 of the US patent number 4,480,958 cited in the IDS dated 11/21/2005 is a blade retainer which is fixed to the turbine disk 84 by bolt 122. The blade retainer 86 does not join two adjacent turbine disks together. Because of this, the blade retainer 86 of the prior art cannot be interpreted as a turbine spacer. Therefore, the instant invention is patentable over the submitted prior art.
